Turn on Projector

Attach Cable
Locate the VGA or DVI cable and attach it to your computer. Attach Audio Cable if necessary.

Launch System Preferences
Select System Preferences from the dock or Apple Menu.

Select Displays
Click the “Displays” icon under Hardware.

Adjust Resolution
Select the Display tab and choose 1024x768.

Mirror Displays
To clone your desktop image to the projector check Mirror Displays under the arrangement tab. If you do not have an arrangement tab click “Detect Displays” from the Display tab.

Adjust Color
Under the projector’s display settings. Select the “Color” tab. Sometimes changing the color profile will result in more predictable color and a brighter projected image. Under the color tab try Wide Gamut RGB or sRGB profiles.
